Skills

- **Red Teaming:** Cobalt Strike, AV/EDR Evasion, Lateral Movement, Process Hollowing, Post-Exploitation
- **AD Exploitation:** BloodHound, Mimikatz, ADCS, LAPS, Kerberoasting, Forest Trust Abuse
- **Web Security:** SQLi, XSS, SSRF, IDOR, OAuth Abuse, OWASP Top 10, HTTP Protocols
- **Tooling:** Burp Suite, Metasploit, chisel, Nmap, Git
- **Dev & Scripting:** Rust, Python, Bash, Shell, TypeScript, Markdown

Red Team Experience

- Top 400 on Hack The Box (67+ rooted boxes). Simulated full kill chains from recon to reporting.
- Built a Rust crypter using AES decryption + process hollowing to execute obfuscated payloads in memory.
- Performed AD attacks: constrained delegation, ADCS abuse, LAPS extraction, inter-forest trust exploitation.
- Deployed pivot chains using chisel and SOCKS proxies across segmented networks.
- Built and audited OAuth-based login system (Next.js + Convex DB) using OWASP-compliant session handling.
- Mentored peers in private Discord labs and wrote Markdown-based attack documentation.
- **Open Source Contributions:**
 - OWASP BLT: Added internationalization/translation feature.
 - PolicyEngine USA: Integrated Ant Design buttons; redesigned and improved footer aesthetics.
 - Pimlico: Added EP0.6/0.7 test cases; fixed `typedData` import issue.

Internship Experience

NCIIPC — Cyber Security Intern

Aug 2025 – Present

- Conducted VAPT on multiple government and enterprise web portals; identified misconfigurations, injection flaws, and access control issues.
- Developed and enhanced an automation-based crawling script to improve attack surface discovery and coverage.
- Performed internal network vulnerability scanning and analysis across segmented environments.
- Tested and validated known CVEs; assisted in impact assessment and remediation guidance.
- Reverse engineered a PSP implementation to analyze and understand malware detection mechanisms and telemetry flow.
- Set up an offline AI-assisted reverse engineering environment for secure malware analysis workflows.

Projects

Red Team Toolkit (Rust/Python)

- Developed internal toolkit for evasive implants, persistence, and privilege escalation modules.

SEV-SNP SVSM Security Research

- Identified a flaw in the SEV-SNP SVSM architecture with impact on trusted execution environment isolation and security assumptions.

Certifications

OSEP – Offensive Security May 2025
Meets/exceeds OSCP ATS filter requirements.

CRTO – Zero-Point Security Feb 2025
Zephyr & Dante – Hack The Box Oct 2024

Achievements

Pentathlon 2025 – National CTF Finalist (NCIIPC & AICTE)
Ranked 17th out of 20,000+ participants nationwide. Placed 24th in Grand Finale due to university constraints.

Extracurricular

Founder – **Yama** (offensive security club, CU); speaker at Cypher Lock events on red teaming and payload chaining.

Education

B.E. in Computer Science – Chandigarh University 2022–2026
Yama club founder, Speaker at Cypher Lock Club.
